
LOW VOLTAGE AC DRIVES

ABB drives for HVAC

ACH580 0.75 to 500 kW

ACH580 series

Leading the way in HVAC drives

Comfort. It's something we take for granted in the buildings we live and work in. But comfort requires efficient systems controlling heating, ventilation, and air conditioning and cooling (HVAC/R) to ensure the air we breathe is pure and the temperature is comfortable. We also need to ensure air quality in the most energy-efficient and cost-effective way – as well as safety – in both normal and mission-critical situations.

For half a century, ABB has been leading the way in optimizing HVAC systems using drive control to ensure that you can take comfort for granted. The new ACH580 series of variable frequency drives (VFDs) provide the quality, reliability, and energy savings you expect, and are easy to use and safe to maintain. All you need to do is to set the drive up, and then focus on what counts.

The next step in HVAC drives

The new ACH580 drives come with a range of advanced features, such as a new primary settings menu that makes commissioning the drives much easier and faster. Bluetooth connectivity improves the accessibility of drives installed in remote areas and increases safety by giving users the ability to stay out of arc flash zones.

Simple to select, install and use

All the essentials – such as chokes, EMC filters, enclosures from IP21/UL Type 1 to IP55/UL Type 12, cabling clamps, and certified BACnet communication – are built into the drive, simplifying selection, installation, and commissioning.

Safe maintenance

The new packaged disconnect solution provides a mains disconnect switch, which further increases safety for people working on the air-handling unit.

Motor control options to meet your application needs

ACH580 drives can be integrated with virtually any type of AC motor, even high-efficiency PM motors and SynRM. The ability to use these motors can reduce your energy costs even more.

Additional I/O options

Never be without back-up I/O points on the jobsite again taking advantage of the added flexibility and accessibility.

ACH580 drives are ideal for the HVAC fans, pumps, compressors, air-handling units and chillers used in hospitals, data centers, shopping centers, tunnel ventilation, factories, office buildings, and more.

Intuitive Bluetooth® control panel

ABB's new HVAC Bluetooth control panel lets you commission the drive remotely, safely outside the arc flash boundary. You can customize the view so that it only shows the information you need, and it automatically saves a backup of your most recent configuration so that it's always available.

Reliable communication

Modbus RTU and BACnet MS/TP are embedded in every ACH580. In addition, a wide range of optional fieldbus adapters are available to enable connectivity with all major building automation and control systems.

Ultra-low harmonic (ULH) for a clean network

The revolutionary ACH580 ultra-low harmonic drive is designed specifically for the HVAC market, minimizing the effect of harmonics on your system. This all-in-one solution is fully integrated with the ACH580 platform and leverages the same programming tools, user settings, options, and functions, and providing excellent harmonic performance.

Premier air handling

We understand the complexity of air handling systems and the need to produce high levels of comfort, control, and safety. Be assured that, regardless of the season or external conditions, we help to make your system efficient, safe, and informative.

Effortless system startup

The ACH580 ensures a smooth, coordinated start to your HVAC system. Embedded interlock logic enables the drive to confirm that equipment position, such as dampers, and sensor status are correct before operations begin.

Increased energy savings

Achieve increased energy savings by using the appropriate motor and drive combination. The ACH580 drive works with induction motors, PM motors, or SynRMs, which enable high efficiencies.

Improved safety

Built-in safety functionality, such as override mode, enables your system to ignore all non-essential faults during emergencies to maintain air quality in the fire exit paths.

**Reduced costs**

The ACH580 reduces costs, for example, by eliminating dependencies on external controllers. The drive can use its internal PID loops to reach a pressure setpoint by checking the active pressure and adjusting the fan speed accordingly.

Optimal system efficiency

Leverage advanced system monitoring, which controls fans and pumps based on feedback from the drive. Use this information to plan maintenance based on the actual needs of the application. For example, with built-in monitoring, the drive notifies you when it's time to take action when a fan stalls, a belt breaks, a filter clogs, and more.

Precise water flow control

The control of water flows in HVAC systems allows you to regulate temperatures in a building. Pumps, chillers, and cooling towers all need to be coordinated. Your system benefits from motor control that operates as efficiently and simply as possible, with functions designed to keep the flow rate in accordance with current needs.

Motor monitoring prevents problems

Protect your investment with onboard monitoring. Monitor and show trends of key attributes for preventative maintenance.

Protect your equipment

Extend equipment life (e. g., pipes, motors, check valves, and pumps) with intelligent motor control. By starting the pumping system smoothly, you protect the system from running without water in the pump, and can manage the flow and the pressure accurately.

**Energy savings through intelligent control**

Intelligent motor control replaces throttle or bypass valves, enabling better control of flow, resulting in energy savings. In addition, fewer mechanical parts results in minimizing wear and tear on the system. To gain additional savings, pair drives with premium-efficiency motors and enable energy optimizer functions to reduce operating costs over the lifetime of the pumping system.

System optimization

As demand fluctuates during the day, the system automatically adjusts to the current demand. The ACH580 provides optimal pressure when needed, and goes into sleep mode when it's not. For example, for systems requiring booster pumps, demand typically varies throughout the day and falls drastically at night and again in the morning.

What does all-compatible mean for you?

Business all-compatible

The all-compatible drives are not just equipment – they are part of your facility management strategy. Providing better control over your processes, our drives mean lower energy consumption, improved indoor air quality, flexibility, and ease of use. In addition to drives, we offer a wide range of products and services to support your business. With offices in over 90 countries and a global network of technical partners, we are in a good position to offer technical advice and local support, worldwide.

Process all-compatible

The drives are compatible with all kinds of processes. They control virtually any type of AC motor, provide extensive input/output connectivity, and support all major fieldbus protocols. The drives cover a wide voltage and power range. The flexibility and scalability of the drives enable one drive platform to control virtually any HVAC application or process, making your drive selection easy.

Environment all-compatible

There is increased demand for industries to reduce their impact on the environment. Our drives can help you reduce energy consumption in a wide range of applications. Our drives have an energy optimizer feature, reducing energy drawn from the supply. The built-in energy efficiency calculators help you to analyze and optimize your processes. We make it easy for you to see the energy savings of selected applications with our six-step energy appraisal.

Our wall-mounted ACH580 HVAC drives comply with the requirements of the highest IE2 drive (EN 50598-2) energy efficiency class, further reducing environmental impact. In addition, all ACH580 HVAC drives are compatible with high-efficiency IE4 and IE5 motors.

Human all-compatible

All our drives share easy-to-use interfaces, saving you time during drive commissioning and maintenance. When you have learned it once, you can use it with all the drives in our all-compatible drives portfolio.

The control panel supports a large number of languages. With the PC tool, you get extensive drive monitoring capabilities and quick access to the drive settings. Integrated and certified safety features provide safety for machine operators.

To further improve the user experience, we have developed the primary settings menu. Also, the mobile apps can be utilized in interacting with the drive. These apps give you an easy graphical interface for management, maintenance, and service of your drives.

Complete offering, from wall-mounted and cabinet-built drives, to ultra-low harmonic drive variants

No matter the frame size or power, all ACH580 drives offer ease of use, scalability, and quality.

ACH580 drive

Wall-mounted drives

The ACH580 wall-mounted drives are available with IP21 or IP55 protection class. The wall-mounted IP21 drives are available in a power and voltage range of 0.75–250 kW and 3-phase, 380–480 V, and offer side-by-side, flange, and horizontal mounting options.

The IP55 variants are designed for applications exposed to dust, moisture, vibration, and other harsh conditions. Similar in size to the compact IP21 drives, they offer significant savings on space, maintenance and engineering, costs, and setup and commissioning time. Typical industries include food and beverages, printing, and rubber and plastics.

Drive modules for cabinet installation

ACH580 drive modules are perfect for system integrators, cabinet builders, and OEMs who want to optimize cabinet design in the 250–500 kW range without compromising on easy installation, commissioning and maintenance.

Cabinet-built drives

Cabinet-built ACH580 drives are available with IP21 protection class as standard (with optional IP42 and IP54 enclosures) in frame sizes R6 to R11. The drives feature a new cooling arrangement and a high-quality, global cabinet design. Available in a power and voltage range of 75–500 kW and 3-phase, 380–480 V.

Ultra-low harmonic drives

The ACH580 ultra-low harmonic drives help to keep the power network clean. With harmonics mitigation built into the drive, the ultra-low harmonic drive produces exceptionally low harmonic content and provides significant benefits, including improved reliability and increased energy savings, as well as extended equipment lifetime.

The ACH580 drives series provides common features throughout the whole product family, making it easy for you to install, commission, and use them for your entire installation.

Overcome challenges of harmonics

ACH580 ultra-low harmonic drives have excellent harmonics performance and are perfectly suited for places that cannot handle high harmonic content in the network.

The problem with harmonics

Generators in power plants rotate at constant and regulated speed, resulting in a sine-wave-shaped current in an AC grid in the ideal case.

However, in reality, it is often is not the case, as electricity networks are affected by harmonics: higher-order oscillations introduced by various types of electrical equipment.

Harmonics in electrical systems can have negative effects, such as overheating or malfunctioning of equipment connected to the grid. With 40% THDi level the need for over dimensioning is approximately 35%.

All-in-one concept for a clean network

ABBs HVAC ultra-low harmonic (ULH) drives are designed with built-in harmonic avoidance systems and meet low harmonic limit recommendations by IEEE519 and G5/5. By equipping the drives with specific features and capabilities, the problems caused by harmonics are avoided in the first place.

There is no need to install external harmonic filters or multi-pulse transformers, leading to significant savings in the footprint. Compared to other harmonic reduction solutions, the ULH drive has excellent harmonic performance ensuring that the current harmonics in undistorted networks are always less than 3%.

ULH drive technology

With an integrated design that leverages drive technology as part of the harmonic solution, there is no risk of nuisance trips due to incompatible components, no need for additional hardware, and no additional cooling requirements.

Lower energy consumption at system level

The HVAC ULH drive reaches unity power factor, indicating that electrical energy is being used efficiently. Active power factor compensation allows the ULH drive to improve the power factor of the building grid, while maintaining the unity power factor on the connected equipment.

Reliable operation under special conditions

The ULH drive ensures that the motor receives the full voltage, even in low-voltage utility conditions. Thanks to the drives' capability to provide an output voltage at a level greater than the supply voltage, applications can overcome voltage drops caused by long supply or long motor cables. All this is done without costly additional equipment or oversizing of drive system components.

Other ways of mitigating harmonics

Passive filter equipment must always be sized for the maximum current, but be aware that the duration of partial-load operation is very significant. Oversizing gives poor mitigation performance and high running costs when running at partial load. It is also a waste of money, as the harmonics are not mitigated properly under partial-load conditions.

With multipulse transformers, you always need to install additional transformers, and the mitigation level isn't at the same low level as in a ULH drive.

Of course, the need for the mitigation is different, and there is no one-size-fits-all solution.

How to select a drive

This is how you build up your own ordering code using the type designation key.

Start by identifying your supply voltage.

This tells you what rating table to use. See pages 20 and 21.

Choose your motor's power and current rating from the ratings tables on pages 20 and 21.

Select your drive's order code from the rating table based on your motor's nominal power rating.

ABB DRIVES FOR HVAC ACH580 0.75 TO 500 KW

Ratings, types and voltages

ACH580-01
 3-phase, U_N = 380...480 V (500 V). The power ratings are valid at nominal voltage 400 V (0.75 to 250 kW).

Pages 20 and 21

Choose your options (on page 23) and add the option codes to the drive's order code. Remember to use a "+" mark before each option code.

Options

Controlling your drive remotely eliminates the need to be at the drive to make adjustments. Accurate remote diagnostics are possible through the building management system (BMS), which enables real-time monitoring. Total building system costs are reduced thanks to the reduced wiring and number of building automation (BA) points, and the ability to use gateway (G) options.

I/O options

Technical data

| Supply connection | |
|---|---|
| Voltage and power range | 3-phase U_N 380 to 480 V, +10/-15% ACH580-01: from 0.75 up to 250 kW ACH580-04: from 250 up to 500 kW ACH580-07: from 75 up to 500 kW ACH580-31: from 4 to 45 kW auto-identification of supply voltage |
| Frequency | 48 to 63 Hz |
| Fundamental power factor ACH580-01, ACH580-04 and ACH580-07 | 0.98 |
| Fundamental power factor ACH580-31 | 1.0 |
| Efficiency at rated power | 98% |
| Motor connection | |
| Supported motor control | Scalar and vector |
| Supported motor types | Asynchronous motor, permanent magnet motor (vector), SynRM (vector) |
| Voltage | 3-phase, from 0 to supply voltage |
| Frequency | 0 to 500 Hz |
| Environmental limits | |
| Ambient temperature | |
| Transportation and storage | -40 to 70 °C |
| Air temperature/relative humidity (operation) | ACH580-01, ACH580-31: -15 to +50 °C; ACH580-07: 0 to +50 °C ACH580-04: -15 to +55 °C. 5 to 95% no condensation allowed |
| Output current | Rated current available at 0 to 1000 m reduced by 1% per 100 m over 1000 m up to 4000 m |
| Degree of protection | ACH580-01 and ACH580-31: IP21 (UL type 1) or IP55 (UL type 12) ACH580-04: IP00, IP20 ACH580-07: IP21 as standard, IP42 or IP54 as option |
| Inputs and outputs | |
| 2 analog inputs | Selection of Current/Voltage input mode is user programmable. |
| Voltage signal | 0 (2) to 10 V, $R_{in} > 200 \text{ k}\Omega$ |
| Current signal | 0 (4) to 20 mA, $R_{in} = 100 \text{ }\Omega$ |
| Potentiometer reference value | 10 V $\pm 1\%$ max. 20 mA |
| 2 analog outputs | AO1 is user programmable for current or voltage. AO2 current |
| Voltage signal | 0 to 10 V, $R_{load} > 100 \text{ k}\Omega$ |
| Current signal | 0 to 20 mA, $R_{load} < 500 \text{ }\Omega$ |
| Internal auxiliary voltage | 24 V DC $\pm 10\%$, max. 250 mA |
| 6 digital inputs | 12 to 24 V DC, 24 V AC. Connectivity of PTC sensors supported by a single digital input. PNP or NPN connection (5 DIs with NPN connection). |
| 3 relay outputs | Maximum switching voltage 250 V AC/30 V DC. Maximum continuous current 2 A rms. |
| PTC, PT100 and PT1000 | Any of the analog inputs, or digital input 6, are configurable for PTC with up to 6 sensors. Both analog outputs can be used to feed the PT100 and PT1000 sensor and KTY83, KTY84 or Ni1000 sensors. |
| External power supply | |
| Standard: | |
| ACH580-01 frames R6-R9 | 1.5 A at 24 V AC/DC $\pm 10\%$ |
| ACH580-04 all frames | 1.5 A at 24 V AC/DC $\pm 10\%$ |
| ACH580-07 all frames | 1.5 A at 24 V AC/DC $\pm 10\%$ |
| ACH580-31 all frames | 1.5 A at 24 V AC/DC $\pm 10\%$ |
| Optional: | |
| ACH580-01 frames R1-R5 | 1.04 A at 24 V AC/DC $\pm 10\%$ |
| Communication | |
| Protocols as standard (EIA-485): BACnet MS/TP, Modbus RTU | |
| Available as plug-in options: BACnet/IP, Modbus TCP, PROFIBUS-DP, PROFINET, CANopen, DeviceNet, EtherNet/IP, EtherCAT, EtherNet POWERLINK | |
| Available as an external option: 2-port EtherNet adapter for remote monitoring | |
| Application functions | |
| | First start assistant |
| | Primary settings for HVAC applications |
| | Hand-Off-Auto operation mode |
| | Start interlock (de-frost) |
| | Delayed start |
| | Run permissive (damper monitoring) |
| | Override operation mode |
| | Real-time clock (scheduling) |
| | PID controllers for motor and process |
| | Motor flying start |
| | Motor preheating |
| | Energy optimizer and calculators |
| Protection functions | |
| | Overvoltage controller |
| | Undervoltage controller |
| | Motor earth-leakage monitoring |
| | Motor short-circuit protection |
| | Motor overtemperature protection |
| | Output and input switch supervision |
| | Motor overload protection |
| | Phase-loss detection (both motor and supply) |
| | Under load supervision (belt loss detection) |
| | Overload supervision |
| | Stall protection |
| | Loss of AI signal monitoring |
| Product compliance | |
| Standards and directives | Low Voltage Directive 2006/95/EC EMC Directive 2004/108/EC Quality assurance system ISO 9001 and Environmental system ISO 14001 CE, UL, cUL, and EAC approvals Galvanic isolation according to PELV RoHS2 (Restriction of Hazardous Substances) EN 61800-5-1: 2007; IEC/EN 61000-3-12; EN61800-3: 2017 + A1: 2012 Category C2 (1 st environment restricted distribution); Safe torque off (EN 61800-5-2) |
| EMC (according to EN61800-3) | ACH580-01, ACH580-07 75-250 kW and ACH580-31 class C2 (1 st environment restricted distribution) ACH580-04 and ACH580-07 250-500 kW class C3 (2 nd environment restricted distribution) |
| Harmonics | IEC/EN 61000-3-12 With ACH580-31 also IEE519 G5/5 |

| 45 | 88 | 124.1 | 45 | 84 | ACH580-31-088A-4 | R6 | |

Nominal ratings

I_N Rated current available continuously without overloadability at 40 °C.

P_N Typical motor power in no-overload use.

Maximum output current

I_{max} Maximum output current. Available for 2 seconds at start, then as long as allowed by drive temperature.

Light-overload use

I_{Ld} Continuous current allowing 110% I_{Ld} for 1 minute every 10 minutes at 40 °C.

P_{Ld} Typical motor power in light-overload use.

For derating at higher altitudes, temperatures or switching frequencies, see the HW manuals, document codes:

3AUA0000076331 ACH580-01

3AXD50000048685 ACH580-04

3AXD50000105090 ACH580-07

3AXD50000037066 ACH580-31

Comprehensive connectivity

Default control connections to the CCU-23 control unit

Total load capacity of the auxiliary voltage output +24 V (X2:10) is 6.0 W (250 mA/24 V DC).
 Wire sizes:
 0.2 to 2.5 mm² (24 to 14 AWG): terminals +24 V, DGND, DCOM, B+, A-, DGND, ext. 24 V
 0.14 to 1.5 mm² (26 to 16 AWG): terminals DI, AI, AO, AGND, RO, STO

Options

Controlling your drive remotely eliminates the need to be at the drive to make adjustments. Accurate remote diagnostics are possible through the building-management system (BMS), which enables real-time monitoring. Total building system costs are reduced thanks to the reduced wiring and number of building automation I/O points, and the ability to use passthrough I/O.

I/O options

| Option code | Description | Type designation |
|-------------|---|------------------|
| +L501 | External 24 V AC/DC and digital I/O extension (2xRO and 1xDO) | CMOD-01 |
| +L523 | External 24 V DC/AC and isolated PTC interface with capability to trigger STO | CMOD-02 |
| +L512 | 115/230V digital input (6xDI and 2xRO) | CHDI-01 |

Input/output extension modules

Standard input and output can be extended by using optional analog and digital input/output extension modules.

Fieldbus adapters

| Option code | Fieldbus protocol | Adapter |
|-------------|--|----------|
| +K465 | BACnet/IP (2-port) | FBIIP-21 |
| +K454 | PROFIBUS-DP | FFBA-01 |
| +K457 | CANopen | FCAN-01 |
| +K451 | DeviceNet | FDNA-01 |
| +K469 | EtherCAT | FECA-01 |
| +K458 | Modbus RTU | F8CA-01 |
| +K470 | Ethernet POWERLINK | FEPL-02 |
| +K462 | ControlNet | FCNA-01 |
| +K475 | 2-port Ethernet (EtherNet/IP™, Modbus TCP, PROFINET) | FENA-21 |

BACnet/IP option

Native BACnet/IP allows for greater bandwidth for more frequent polling/monitoring and more devices on the same sub-network. Thanks to the two-port design of this adapter, the need for external switches and installation time are reduced. Different buildings may have different fieldbuses, and we have multiple option modules to satisfy your needs.

Control panel options

HVAC control panel (ACH-AP-H) is included as standard in the delivery unless otherwise specified.

| Option code | Description | Type designation |
|-----------------|---|------------------|
| +J400 | HVAC control panel (standard) | ACH-AP-H |
| +J429 | Control panel with Bluetooth interface | ACH-AP-W |
| +J424 | Blank control panel cover (no control panel delivered) | CDUM-01 |
| 3AXD5000004419 | Panel bus adapter (no control panel delivered) | CDPI-01 |
| 3AUA0000108878 | Control panel mounting platform (flush mounted, requires also panel bus adapter on the drive) | DPMP-01 |
| 3AXD5000009374 | Control panel mounting platform (surface mounted, requires also panel bus adapter on the drive) | DPMP-02 |
| 3AXD50000016230 | Control panel mounting platform option, only for ACS580-04 modules | DPMP-03 |
| 3AXD50000010763 | Door mounting kit for the panel (for one drive, contains both DPMP-02 and CDPI-01) | DPMP-EXT |

Wireless connectivity

With the Bluetooth-enabled assistant control panel, you can able to commission, start, stop, and monitor the drive, and reset faults from different devices such as tablets.

Save time, ease troubleshooting and improve drive performance with ABB smartphone apps

Better connectivity and user experience with Drivetune

Easy and fast access to product information and support

Manage your drives and the process lines and machines they control

Easy access to cloud-based drive and process information from anywhere via an online connection

Start up, commission and tune your drive and application

Simplified user guidance with instant access to drive status and configuration

Performance optimization via drive troubleshooting features and fast support

Services and support on the go with Drivebase

Search for support documents and contacts

Maintain and service all your installed drives on one or multiple sites

Get 6 months extra warranty for free by registering your drive with the Drivebase app

Access your product and service information in the cloud from anywhere

Access your drive's diagnostics data

Push notifications for critical product and service updates

Access information anywhere

Download the apps using the QR codes below or directly from the app stores

Drivetune for commissioning and managing drives

Drivebase for ensured reliability and reduced downtime on production sites

High protection for operation in harsh environments

The ACH580 can be installed in clean rooms, or even dusty and wet environments, thanks to the drive's wall-mountable construction in both IP21 and IP55 configurations. The cabinet-built variant comes with IP21 as standard and is also available with IP42 and IP54 protection classes for use in harsh environments.

The robust and protective design ensures that no additional enclosures or components, such as dust filters and fans, are needed. Overall, the harsh protection drives require smaller capital expenses by avoiding or advancing maintenance of external components, which in turn improves the reliability of the drive and the process.

Flange mounting

The ACH580-1 wall-mounted drive offers flange mounting as an option, separating the control electronics from the main circuit cooling airflow, saving space and ensuring optimal cooling. This results in better thermal management during panel installation and also reduces the overall enclosure size.

Advanced cooling

The simple and robust design of the ACH580-07 ensures reliable operation, even in harsh environments. The flange-mounting feature is standard for the cabinet-built ACH580 drive, which separates the heat-generating power electronics from the more sensitive control electronics. This extends the product's life.

du/dt filters

du/dt filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high-frequency emissions from the motor cable as well as high-frequency losses and bearing currents in

the motor. The need for du/dt filtering depends on the motor insulation. For information on the construction of the motor insulation, consult the manufacturer. More information on the du/dt filters can be found in the ACH580 hardware manual.

| External du/dt filter for ACH580-01 and ACH580-04 | | du/dt filter type * 3 filters included, dimensions apply to one filter. | | | | | | | | | | | | | | | | | |

¹⁾ Motor with restamped output required (option +002)

²⁾ Motor non-conformable with IE4 EE class

* Motor type M3AL = aluminum motor frame

* Motor type M3BL = cast iron motor frame

** Calculated package efficiency values for ACH580-01

***PDS = Power Drive System

Selection guide

IE4 synchronous reluctance motors

This table presents technical performance data for IE4 SynRM motors. Variant codes and construction details are based on the M3BP motor. Protection IP55, cooling IC 411, insulation class F, temperature rise class B. Motor values are given with an ACH580 drive supply.

| Output kW | Motor type | Product code | Motor efficiency % | Motor nominal current A | Motor nominal torque Nm | Motor weight Kg | Suggested ACH580 drive for no overload pump use* | Package efficiency ** IES at nominal point (Pn) % | PDS*** IES2 efficiency class low limit % | Above IES2 low limit % | Frame size |
|-----------------|-------------|-----------------|--------------------|-------------------------|-------------------------|-----------------|--|---|--|------------------------|------------|
| 3000 rpm | | | | | | | | | | | |

Ultimate efficiency and reliability to optimize your system's total cost of ownership

Traditional IE2 induction motor

IE4 synchronous reluctance motor SynRM

Losses

Innovation inside

The idea is simple. Take a conventional, proven stator technology and a totally new, innovative rotor design. Then combine them with a dedicated HVAC industry drive loaded with new, application-specific software. Finally, optimize the whole package for applications such as fans, pumps, compressors, air-handling units and chillers.

Magnet-free design

Synchronous reluctance technology combines the performance of a permanent magnet motor with the simplicity and service-friendliness of an induction motor. The new rotor has neither magnets nor windings, and suffers virtually no power losses. And because of identical footprints it is easy to replace an induction motor with a SynRM.

Superior reliability to minimize the cost of not running

IE4 synchronous reluctance motors have very low winding temperatures, which increases the reliability and life of the winding. More importantly, the cool synchronous reluctance rotor means significantly lower bearing temperatures – an important factor because bearing failures cause about 70 percent of unplanned motor outages.

Choose the motor for you HVAC application

Induction motors and the ACH580 form a reliable combination

Induction motors are used throughout the industry in many HVAC applications and in a wide range of environments. ACH580 drives fit perfectly together with this type of motor by providing comprehensive functionality, yet simple operation. IE3 and IE4 motors and our VSD provide a perfect foundation for energy efficiency, while delivering capabilities such as exceeding the nominal motor speed when maximum power is needed.

Permanent magnet motors and the ACH580 for smooth operation

Permanent magnet technology is used for improved motor characteristics in terms of energy efficiency and compactness. This technology is particularly well-suited for low-speed control applications, as they eliminate the need to use gearboxes. Even without speed or rotor position sensors, ACH580 drives can control most types of permanent magnet motors.

IE4 synchronous reluctance motors and the ACH580 for optimized energy efficiency

Our drive and motor pairings ensures your energy efficiency levels. The key is in the rotor design. Combining the ACH580's control technology with our synchronous reluctance motors (SynRM) will give you a motor and a drive package that ensures energy efficiency, reduces motor temperatures and provides a significant reduction in motor noise.

Services to match your needs

Your service needs depend on your operation, life cycle of your equipment and business priorities. We have identified our customers' four most common needs and defined service options to satisfy them. What is your choice to keep your drives at peak performance?

Is uptime your priority?

Keep your drives running with precisely planned and executed maintenance.

Example services include:

- Life Cycle Assessment
- Installation and Commissioning
- Spare Parts
- Preventive Maintenance
- Reconditioning
- ABB Drive Care agreement
- Drive Exchange

Operational efficiency

Is rapid response a key consideration?

If your drives require immediate action, our global network is at your service.

Example services include:

- Technical Support
- On-site Repair
- Remote Support
- Response time agreements
- Training

Rapid response

Drives service

Your choice, your future

The future of your drives depends on the service you choose.

Whatever you choose, it should be a well-informed decision. No guesswork. We have the expertise and experience to help you find and implement the right service for your drive equipment. You can start by asking yourself these two critical questions:

- Why should my drive be serviced?
- What would my optimal service options be?

From here, you have our guidance and full support along the course you take, throughout the entire lifetime of your drives.

Need to extend your assets' lifetime?

Maximize your drive's lifetime with our services.

Example services include:

- Life Cycle Assessment
- Upgrades, Retrofits and Modernization
- Replacement, Disposal and Recycling

Life cycle management

Your choice, your business efficiency

ABB Drive Care agreement lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extended drive lifetime and improved cost control. So you can reduce the risk of unplanned downtime and find it easier to budget for maintenance.

We can help you more by knowing where you are!

Register your drive at www.abb.com/drivereg for extended warranty options and other benefits.

| Option code | Description |
|-------------|---|
| +P931 | ACH580 extension of warranty to 36 months from delivery |
| +P932 | ACH580 extension of warranty to 60 months from delivery |

Is performance most critical to your operation?

Get optimal performance out of your machinery and systems.

Example services include:

- Advanced services
- Engineering and Consulting
- Inspection and Diagnostics
- Upgrades, Retrofits and Modernization
- Workshop Repair
- Tailored services

Performance improvement

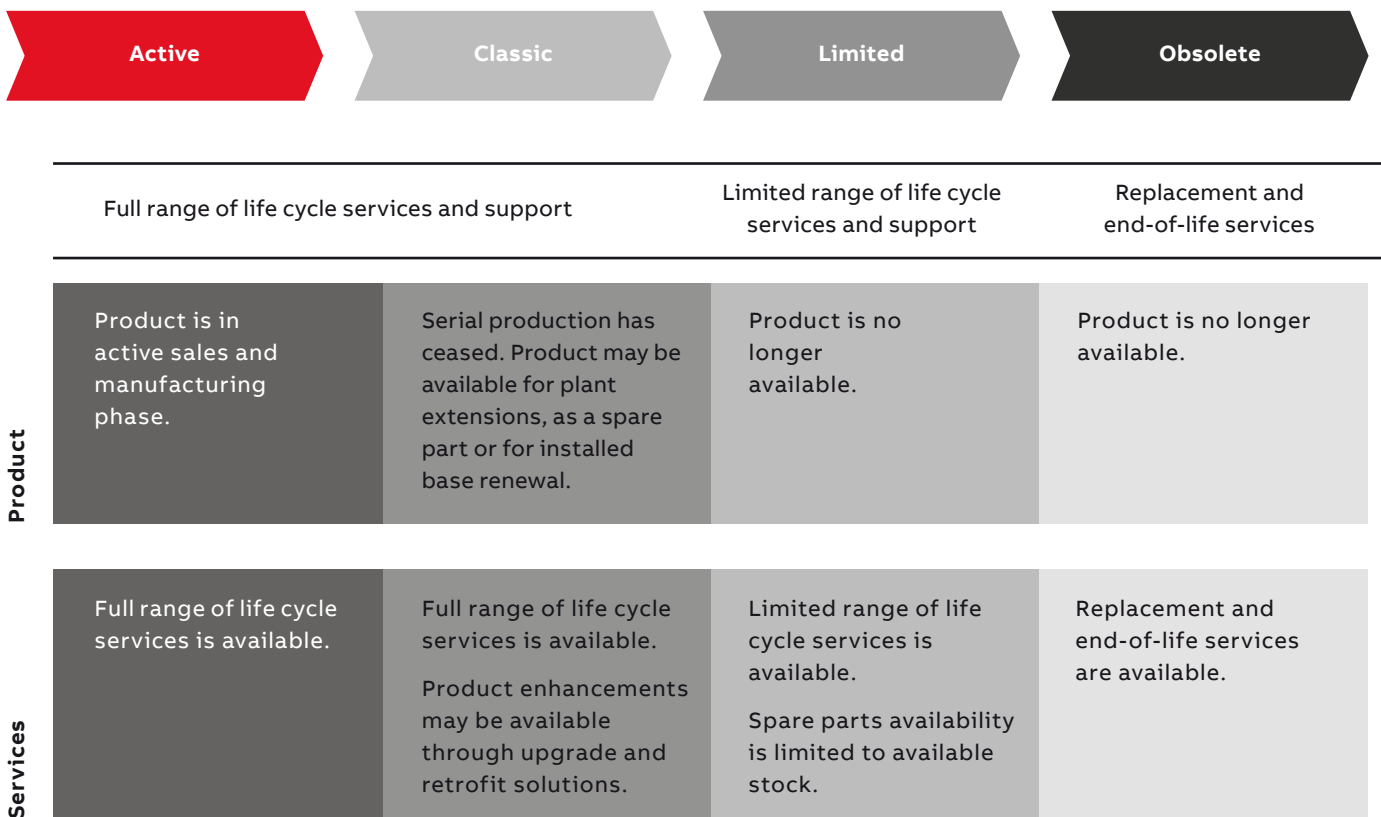

A lifetime of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

ABB drives life cycle phases explained:

Keeping you informed

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Step 1

Life Cycle Status Announcement

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

Step 2

Life Cycle Status Statement

Provides information about the drive's current life cycle status, availability of product and services, life cycle plan and recommended actions.
