

## Warehouse, Logistics & Pedestrian Safety

Traffic Management & Asset Protection Solutions

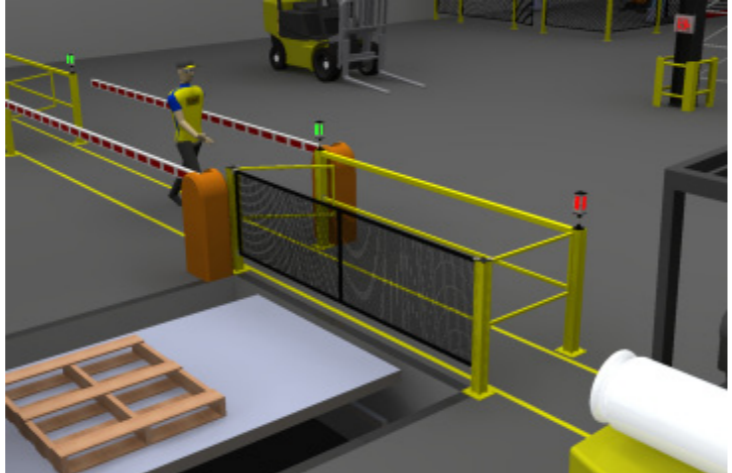

**CellTec**

**① Machine Safety Guarding**

CellTec's own Zone Safety Systems range of machine safety guarding has been developed with a focus on providing a safety solution which assists our customers in manufacturing their products safely whilst achieving maximum production and compliance with safety standards.

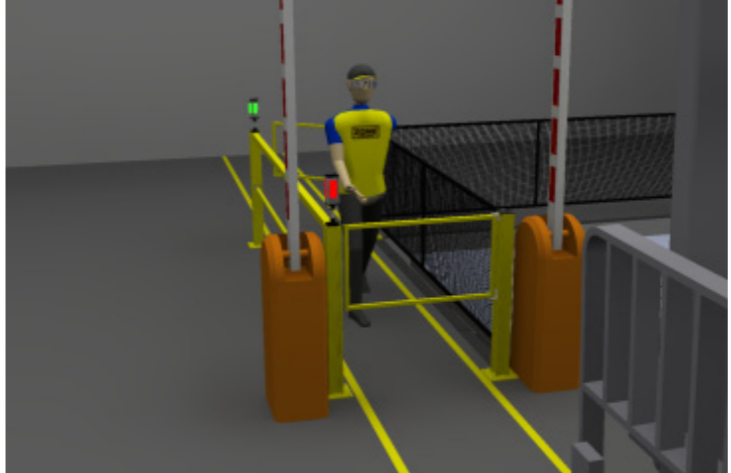

Zone guarding has been used in a diverse number of applications including: automated production, warehousing, conveying, palletising and robotics. We have engineered the most effective and efficient industrial fencing: available in both standard off the shelf and custom solutions designed to your specification.

**② Pedestrian Dock Safety Systems**

Pedestrians crossing loading docks when forklifts are in operation is a constant and dangerous OHS issue. Using booms and locking pedestrian gates, CellTec's Pedestrian Dock Safety System adapts operation to allow appropriate and safe access.

When forklifts are in use during the loading and unloading process, pedestrians are kept safety behind locked gates. Once this process is complete boom gates are lowered preventing access to forklifts whilst gates are unlocked allowing pedestrian to safety cross the docking area.

**③ Pedestrian Gate Locking Systems**

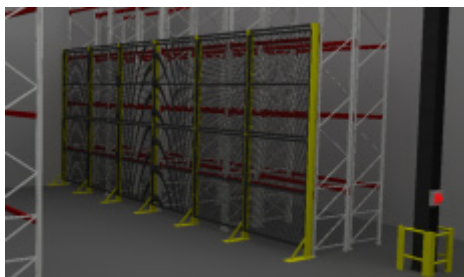

CellTec's gate locking system prevents access by locking pedestrian gates when a forklift, AGV or another vehicle is detected within a specified area. This provides pedestrians with the ability to cross safely in areas where vehicles are operating. Various activation options and methods allows the locking system to be adapted to suit your environment.

**④ Forklift, AGV & Pedestrian LED Signs**

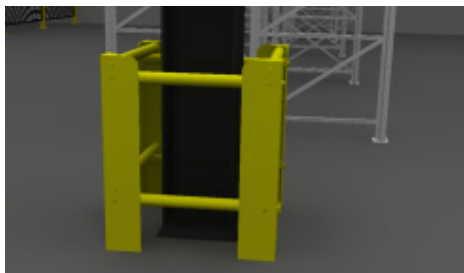

Forklift trucks and Automatic Guided Vehicles (AGV's) are an ever-present hazard to pedestrians in many workplaces. CellTec's LED Forklift warning signs have been designed to inform and warn pedestrians of forklift trucks or AVG's operating in the area. While the LED Pedestrian signs indicate to pedestrians when it is or isn't safe to walk across or within the designated area.

Using instantly recognisable icons instead of basic beacons gives a more effectual indication of the type and degree of the impending hazards.

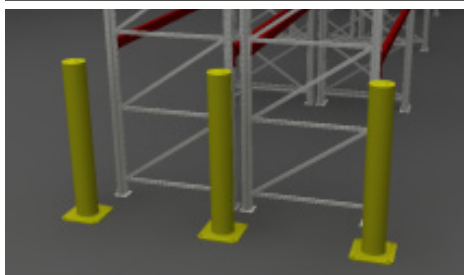

## Overheight Protection

Objects falling from pallet racking into an aisleway could potentially injure someone or damage equipment. CellTec manufactures standard and heavy duty guarding to be placed against the racking to prevent this from happening.

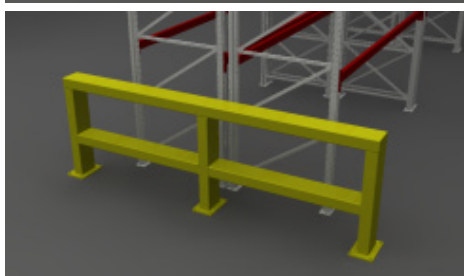

## Column Protection

Damage to structural columns can be costly to repair. CellTec's Column Protectors provide protection to columns and racking from damage by forklifts and other mobile plant and machinery.

## Bollards

Bollards are suited for both domestic and commercial applications, providing protection for property and personnel against vehicle impacts and collisions. Various sizes and colours available.

## Forklift Barriers

Save on costly repairs and lost time with impact protection barriers. These barriers are ideal in minimising damage caused to machinery and equipment by forklifts and other mobile plants. Various sizes and colours available.
